

Nov 22 Jan. 1846

Dear Sir

This serves to introduce to your acquaintance
J. L. Very Esq^r a particular friend of mine, who you will find
worthy of any attention or civilities you may have it in your
power to pay to him while he may remain in your place
Our friend David D. Owen is at present in Ohio giving
lectures on Geology - when we were with you you seemed
to have some intention of paying us a visit here. I need
not say how glad we should both be to see you and our best
endeavours would be used to render your stay amongst us
as agreeable as possible. I remain

Yours sincerely
Amacheur

most unique and distinctive of all the trees
being more like some of the old growth forests of the world.
The trunk is straight and upright with few branches,
the bark smooth and greyish-white, with a few small
projections and markings due to insect damage. The leaves are
numerous and green, with a few yellow ones interspersed
among them. The flowers are small and white, appearing in
clusters at the ends of the branches. The fruit is a small, round
seed pod containing one or two seeds.
